

Soham Kundan Save

Jersey City, NJ 07304 | [Email](#) | (201)-238-1347 | [LinkedIn](#)

EDUCATION

Pace University, Seidenberg School of Computer Science and Information Systems

New York, NY

Master of Science (MS) in Computer Science | **Concentration:** Data Science | **GPA:** 3.86

May 2021

Bharati Vidyapeeth, College of Engineering

Maharashtra, India

Bachelor of Engineering (BE) in Electronics and Telecommunications

May 2018

EXPERIENCE

Dell Technologies

Remote, NJ

Senior Analyst, Data Science

September 2021 - Present

- Built an Agent on Glean which will be used by sellers to check asset refresh and renewal for their respective accounts with help of custom actions and help sellers draft outreach email, meeting agenda and discovery questions, and follow-up emails helping them reduce their time by providing them insights.
- Enhanced an AI agent that pulls Business Processes from ARIS to generate Markdown and PDFs of the processes that will be consumed by an Agent on Glean by implementing LangFuse integration, logging, improving prompts and accommodation for more than 100 Business processes.
- Collaborated in team of 6 to conduct account retention analysis by segmenting accounts into 5 buyer categories and comparing key metrics across segments which will be used for strategic planning of the current Fiscal Year.
- Designed an Agentic AI framework that orchestrates multiple AI agents based on user intent to specialized agents as an MCP client connected to MCP servers having various tools.
- Improved chatbot accuracy from 65% to 87% by fine-tuning the embedding model using MLflow and generating a synthetic question dataset using LLMs, enhancing response relevance and overall user experience.
- Collaborated with a 3-member team to develop a FastAPI based chatbot utilizing RAG to centralize sales content and streamline seller information access.
- Designed and implemented MS SQL infrastructure to log user interactions and feedback, enabling the reporting team to generate insights for leadership on chatbot performance and seller engagement.
- Automated daily ETL workflows using Airflow to refresh articles in a PGVector database, run regression tests for accuracy validation, and trigger embedding model fine-tuning when needed.
- Developed a hierarchical top-down classification model with an accuracy of 93% to categorize user queries, enabling the business to gain insights into question types and enhance reporting and strategic decision-making.
- Partnered with cross-functional teams to use Machine Learning solutions, leveraging MLflow for performance monitoring and automating workflows including ETL, model training, and prediction using Airflow.
- Led code translation and issue resolution during a complex project migration, while monitoring performance and reporting data and accuracy issues for timely resolution and smooth deployment.
- Supported multiple teams in deploying applications built on diverse tech stacks using CI/CD pipelines for seamless deployment to both Cloud Foundry and Docker containers orchestrated through Kubernetes, enhancing delivery speed and reliability.

Shoptaki

Remote, AZ

Data Science Intern

June 2021 - August 2021

- Assisted in building a website for data science purposes, enabling online data processing, and collaborated in a team to develop a handwritten recognition system for converting handwritten PDF files into Word document

TECHNICAL SKILLS

Programming languages: Python, GO Lang, SQL, MATLAB

Software: Glean, Jupyter Notebook, PCF, Azure Boards, Hashicorp Vault, Microsoft Office, Node.js, Tableau, GIT, Windows, Linux, Automation Anywhere, S3 Browser, Visual Studios, Docker, Kubernetes

AI / ML Libraries: OpenAI, Langchain, LangGraph, LangFuse, TensorFlow, PyTorch, Scikit-learn, NLTK, Spacy, Keras, NumPy, Pandas, Matplotlib, Seaborn, Beautiful Soup, Airflow, Mlflow, Boto3

Certifications: Machine Learning using MATLAB, PyTorch Essential Training: Deep Learning, Machine Learning in Production
